ABSTRACTED-PUB-NO: WO 9932415A
BASIC-ABSTRACT:

NOVELTY - An injected first coating resin (11) is applied to an outer circumferential surface of an optical fiber (1) while inserting the fiber (1) into a first die hole (3a) of a first coating die (3), and an injected second coating resin (15) is applied to an upper surface of the first coating resin (11) while inserting the fiber (1) into a second die hole (4a) of a second coating die (4).

DETAILED DESCRIPTION - The first and second die holes (3a, 4a) are coaxially provided. The second coating resin (15) is injected into the second die hole (4a) through a clearance (10) defined by the first and second coating dies (3, 4). The first coating die (3) has a projection (5) provided at an outlet of the first die hole (3a) so as to extend in the direction in which the optical fiber (1) is passed, and so as to distribute a flow of the second coating resin (15) in the direction in which the optical fiber (1) is passed.

USE - Optical fiber coating.
